Seenpaid landing page

The page itself is polished and honest. What it lacks is proof, a sharp hook, and any Instagram or Facebook support.

$468	0	18 / 21	0
all-time revenue, Stripe-verified on TrustMRR (19 Oct)	active subscriptions; $0 revenue in the last 30 days	platforms actually live; Instagram, Facebook and Pinterest are marked SOON	testimonials, reviews or case studies on the page

WHAT I REVIEWED

seenpaid.com on desktop and at the narrowest mobile width Chrome allows (550px), plus /pricing and /signup (viewed only; no account was created, so the card step comes from his FAQ), and Justinas's X in a logged-in Chrome. He has 7,111 posts and I did not read them all. I read the roughly 70 posts X search returned for his account that mention Seenpaid (Aug 24 launch to Oct 6), his main timeline for about Oct 13–19 and third-party mentions, and cross-checked TrustMRR, clacky.app and his personal site.

CONTEXT THAT CHANGES HOW TO READ THE PAGE

Revenue. TrustMRR (Stripe-verified, read Oct 19) shows $468 all-time, $0 in the last 30 days and no active subscriptions. A TrustMRR bot post on Sep 11 showed the same $468 with 4 subs and $80 MRR, so nothing has been added since. His Oct 3 recap lists Seenpaid's September as $0, which I couldn't reconcile with that.

Founder focus. On Oct 6 he told another founder Seenpaid is "gathering dust" while Meta verification blocks Instagram and Facebook. He now leads with Clacky: his first bio link, banner and personal site are all Clacky. X search shows no Seenpaid post from him after Oct 6.

Doing right 9 POINTS

01 **One action, repeated consistently.**
Every CTA (nav, hero, three plans, closing block, footer) goes to the same signup page, and the orange fill is reserved for the primary action. The only alternative is a quiet set-up-for-your-agent link, so attention is never split.

02 **A product demo before any signup.**
Right under the hero, a sample-run terminal and a week-view calendar (labelled sample data) show the AI-agent idea working. It proves the promise instead of describing it.

03 **Caveats are stated, not hidden.**
The FAQ admits the card requirement, the paid X API key, TikTok drafts only, and no inbox, follower analytics or free tier. That pre-empts post-signup disappointment and sounds more credible than big-brand copy.

04 **Simple, risk-reduced pricing.**
One value metric (workspaces), every feature on every plan, a highlighted middle tier, and $0-today / cancel-anytime microcopy under every button. The decision is easy and the risk is removed at the click.

05 **Founder-led trust at the decision point.**

His photo and a real-human-support line sit right under the hero CTA, backed by an open-source posting layer and a named legal entity in the footer. For a product that holds your social tokens, that is cheap, credible reassurance.

06 **The revenue-per-post table makes the differentiator concrete.**

Clicks, sales and dollars per post, with a shareable receipt, is the page's most distinctive proof of value. It turns an abstract claim into a screenshot-able outcome (sample data, but labelled).

07 **Soft paths for visitors who aren't ready.**

A free six-chapter playbook with no email gate and four free tools give SEO surface and goodwill before the pitch. The missed lead capture is covered under "Doing wrong".

08 **Fast and already localised.**

About 1.8s load in my run, no horizontal overflow at mobile width, an EN/ES toggle and a theme toggle. The basics are done properly.

09 **Honest building in public is his best content** OFF-PAGE

His personal, number-led posts, including ones showing $0, drew 1.8–2.3K views (the on-camera launch video, the 400-followers post, the Oct 3 recap). That is roughly an order of magnitude more than his scheduled feature posts. It builds trust and gives him a warm audience to send to the page.

Doing wrong 10 POINTS

01 **No social proof anywhere.**

No testimonials, customer count, logos, case study or reviews, and the footer has six small indie-directory badges. Unused proof on his X: the Sep 2 post tracing $139 to a single post, the ChatGPT directory approval (Sep 24) and the MCP Registry listing. With a card up front at $20–70/mo, this is the biggest leak.

02 **The hero sells the commodity, not the differentiator.**

The headline is AI-agent scheduling, a crowded space (his own footer names Buffer, Hootsuite, Postiz and Post Bridge as rivals). Revenue per post, the part that differentiates it, is a tagline plus an off-by-default optional block. Yet the title tag, meta description and signup page still lead with it, so the message flips along the journey.

03 **"21 platforms" overstates what's live.**

Instagram, Facebook and Pinterest are marked SOON, so 18 are live, including a generic webhook and TikTok drafts only. The agency tier targets managers for whom Instagram and Facebook are core (he himself calls them the main platforms to post on). The pricing FAQ lists them among the 21 available today, then says they're coming.

04 **Cost and friction surface too late.**

The card requirement lives in the FAQ; the CTAs and signup page say $0 or no charge today and never mention it. Posting to X needs your own paid X API key, disclosed only in the plan list and FAQ, even though X is where his audience lives. I couldn't test past signup, but expect drop-off at the plan and card step.

05 **One heavy conversion path, no fallback.**

Everything leads to account, then plan, then card: no free tier, no email capture (the playbook is deliberately ungated), no sandbox or real sample report. An interested-but-not-ready visitor leaves untraceable.

06 **Blurred audience, jargon-heavy hero.**

The hero and nav talk to AI-agent users (note the MCP badge), the plans to agencies and large brands, the footer to solo founders. A non-technical social manager may not recognise it's for them, and the agency tiers sit oddly against the peer-builder audience his X mostly reaches (inferred).

07 **Inconsistent terms and numbers where buyers read closely.**

Plans are sold by workspaces but the FAQ says connected accounts are what differ; the cards promise 11 features and the list shows 10; analytics are described in euros while prices and the demo use dollars. Small, but they read as unfinished.

08 **Mobile has no persistent CTA on a very long page.**

At 550px (Chrome's minimum, not a real phone) the header is just a hamburger, and the page runs about 12,000px versus 8,084px on desktop. The sticky desktop CTA vanishes where X visitors likely land.

09 **Visitors who vet the founder find a pivot** OFF-PAGE

Both Justinas links go to his X, where the first bio link is Clacky, the banner promotes Clacky, and the pinned 1M-user goal is tied to Clacky by his daily updates. His public TrustMRR also shows no active subs. For a subscription that touches your social accounts, that reads as abandonment risk.

10 **His X activity isn't feeding the funnel** OFF-PAGE

Scheduler-posted feature tweets got about 45–250 views and 0–7 likes; the hourly generic questions of Sep 27–28 (same minute every hour, so likely automated) got about 90–300. Reply-bait posts (drop your project URL, drop your X handle) reached 765–875 views but, I infer, mostly from peers rather than buyers (I didn't read the replies).

IF YOU FIX ONLY THREE THINGS

1. Add real proof: the $139 story and the ChatGPT approval.
2. Lead the hero with revenue per post, so it matches the signup page and title tag.
3. State card-required and the X API key next to the CTA, and either ship Instagram and Facebook or drop them from the platform count.

SOURCES AND LIMITS

Sources. seenpaid.com · seenpaid.com/pricing · seenpaid.com/signup · trustmrr.com/startup/seenpaid (read 19 Oct 2026) · x.com/JustinasRoland0 · Oct 3 recap: x.com/JustinasRoland0/status/2106338976072396999 · Oct 6 reply: x.com/JustinasRoland0/status/2107218041872208264 · clacky.app · justinasrolando.com

Limits. X view and like counts are as displayed on 19 Oct 2026. Mobile was checked at 550px, Chrome's minimum window width, not on a phone. The card step and everything after signup were not tested. Inferences are marked as such.
